GROSS MARGIN

\$2.81

HALO REVENUE PER \$1 AD SPEND
($P < 0.00001$)

10%

OF ALL US AUTO-GLASS CLAIMS HAPPEN IN AZ

Raising **\$4-5M growth capital** for bolt-on acquisitions + marketing acceleration. Tech platform already built and operating — licensed in from an independent vendor. The plan does not require paying off legacy obligations to unlock the upside.

Arizona is the single best auto-glass market in the United States.

The numbers don't lie

Arizona files **10% of all US auto-glass claims** despite having only **2% of the US population**. More claims than California or Texas – combined.

- ▶ Monsoon hail + chip-prone freeways
- ▶ Year-round driving (no winter dormancy)
- ▶ Population growth +1.5%/yr

The regulatory tailwind

Arizona Revised Statute § 20-263: insurers must offer \$0-deductible glass coverage on any comprehensive policy. Insurers *cannot* raise premiums on glass-only claims.

- ▶ Consumer friction to replace = essentially zero
- ▶ Direct insurance billing relationships are the moat
- ▶ \$4.5B in recent AZ hail-related insured losses

Sources: NICB; ARS § 20-263; Insurance Journal (West, 2020)

\$20B and growing — with a secular tailwind nobody can stop.

\$170M

AUTO GLASS NOW SOLD TO DRIVEN BRANDS

8.0× EBITDA · 2021

Now a standalone reporting segment

Every new vehicle now ships with ADAS cameras mounted to the windshield. Every windshield replacement requires recalibration. Every recalibration is **\$150–\$600 of additional, higher-margin revenue**. The market is moving the right way.

A fragmented, consolidatable industry — with one giant and a thousand mom-and-pops.

OPERATOR	SCALE	TYPE
Safelite	\$3.3B+ rev · ~20% share	Corporate
Auto Glass Now	~140 locations	Corporate (Driven Brands)
PGW Auto Glass	~160 branches	PE (One Equity)
Glass Doctor	~140 units	Franchise (Neighborly)
Novus Glass	~100 units	Franchise
Everyone else	Hundreds of independents	Mom-and-pop

The arbitrage

- ▶ Single shops sell at 2.5–4.5× SDE
- ▶ Multi-shop operators (MSOs) sell at 3.5–6.5× EBITDA
- ▶ Platforms (10+ locations) sell at 7–10×+ EBITDA
- ▶ Tech-enabled platforms get a +1.5–2 turn premium on exit

→ Build a platform from independents at 4×, exit the bundle at 8×. The math is well-understood. The question is execution.

AVERAGE TICKET

Above the median

Industry single-shop AUV averages **\$1.2–1.5M**. AG2020 is doing 2-2.5× that – and with healthier gross margins than chains operating at scale.

Founded 2020, operating since

Built and run by Cash, an auto-glass operator with **decades of profitable shop-running history**. Phoenix shop. Insurance + retail revenue mix. Direct billing relationships in place.

Every independent shop fights blind – and loses to Safelite by default.

The four cuts that bleed independents

- ▶ **No attribution:** Owners spend on Google, Meta, billboards, referrals – and have no idea which dollar earned which job.
- ▶ **No speed-to-lead:** Web form fills sit in an inbox. Calls go to voicemail at lunch. Safelite picks the customer up.
- ▶ **No data integration:** Ads platform, CRM, scheduling, billing, insurance EDI – five disconnected systems, three people retyping.
- ▶ **No transferable playbook:** Owner retires; the business loses 30% in 18 months. No SOP, no acquirer.

"Most independent operators can't tell you their CAC, their LTV, or their ad ROAS to two decimal places. We can – and the spread is the opportunity."

A purpose-built operating system for the modern auto-glass shop.

Lead engine

- ▶ Multi-channel attribution (Google, Meta, organic, referral, walk-in)
- ▶ Phone tracking + AC sync
- ▶ Speed-to-lead autodialer: form fill → live call to customer within 60 seconds, bridged to a rep
- ▶ Branded outbound caller ID

Conversion + ops

- ▶ CRM ↔ scheduling ↔ billing fully integrated
- ▶ SMS thread continuity (no rep retyping)
- ▶ Missed-call rescue (returns calls automatically during business hours)
- ▶ Call triage queue + outcome capture

Closed-loop attribution

- ▶ Every closed invoice traced back to first-touch source
- ▶ Per-source CAC, LTV, ROAS in real time
- ▶ 6 years of historical revenue layered in
- ▶ Statistically tested halo-lift coefficient (see next slide)

Already running. Already deployed. Already generating the numbers on the next slide.

Every \$1 of ad spend lifts *unattributed* weekly revenue by \$2.81.

Deseasonalized. Detrended. Multiple regression on 117 weekly observations. Result holds at 1-, 2-, and 4-week lag. No serious statistical objection survives.

\$2.81

PER \$1 SPEND

t=6.83

ON 103 DF

PROBABILITY THIS IS NOISE

\$2.00 – \$3.62

95% CONFIDENCE INTERVAL

Most operators cite "marketing works" as a feeling. We can prove it with a 95% confidence interval that doesn't cross zero – and translate it into per-shop economics.

When ad spend rises, total revenue rises – across the entire customer base, not just attributable conversions.

WEEK TYPE	AVG SPEND	AVG TOTAL REV
Bottom-quartile spend weeks (n=29)	\$1,725	\$98,609
Top-quartile spend weeks (n=29)	\$17,394	\$141,348
Lift	+10×	+43%

Welch's t-test: p = 0.008. The lift is real, not noise.

What this means for an expansion thesis

If each new shop replicates AG2020's spend-to-revenue relationship, **every \$100K of ad budget produces \$310K of total revenue lift** – including walk-in, referral, and repeat customers ads don't get direct credit for.

That's how you out-bid Safelite in a market and still come out ahead.

The per-shop model – credible numbers, conservative assumptions.

METRIC	AG2020 TODAY	YEAR 1 (ESTABLISHED)	YEAR 2 (MATURE)
Annual revenue	\$3.2M	\$1.5M	\$2.4M
Gross margin %	45%	42%	45%
Gross profit	\$1.44M	\$630K	\$1.08M
Operating overhead (rent, labor, ops)	\$1.0M	\$520K	\$700K
Ad spend (model: 8% of revenue)	\$256K	\$120K	\$192K
Platform license (3% of revenue)	–	\$45K	\$72K
Shop EBITDA	~\$184K	~-\$55K	~\$116K
EBITDA margin	5.8%	(ramp)	4.8%

New-shop ramp assumes 6 months to revenue + 12 months to stable margin. Mature-shop EBITDA conservatively held below AG2020's current level to reflect new-market discovery costs. Add ADAS-calibration upside not modeled here.

From 1 shop to 5 – and a credible platform exit in 36–48 months.

YEAR	SHOPS	SYSTEM REVENUE	SYSTEM EBITDA	MILESTONE
Y0 (today)	1	\$3.2M	\$184K	Acquire bolt-on #1 in Phoenix metro
Y1	2	\$4.7M	\$160K	Bolt-on #2 acquired; platform deployed
Y2	3-4	\$9.1M	\$700K	Tucson + 2nd Phoenix shop
Y3	5	\$13.5M	\$1.6M	Las Vegas / Albuquerque footprint
Y4 Exit	5+	\$15-18M	\$2.5-3M	Platform exit at 7-8× EBITDA → \$18-24M EV

Acquisition channel

Phoenix metro alone has hundreds of independents. AG2020 is well-known in the market – we have a relationship-led pipeline of 8-12 targets at any time.

Platform deployment

The tech stack drops into a new shop in 2-4 weeks. Lead-flow lift is visible within 60 days. Bolt-ons earn their multiple expansion fast.

Roll-up arbitrage

Buy at 4× SDE → operate at platform scale → exit at 8× EBITDA + 1.5-turn tech-enabled premium = 3-3.5× multiple expansion per add-on.

A profitable operator backed by an arm's-length technology partner. Two contracts, two cap tables, one outcome.

Cash — CEO & Operator (the OpsCo)

- ▶ Decades of profitable auto-glass operating experience
- ▶ Phoenix-market insurance and direct-billing relationships
- ▶ Day-to-day operational lead: hiring, customer service, vendor management, insurance EDI
- ▶ Owner-operator commitment: skin in the game, post-deal vesting on equity
- ▶ OpsCo holds AG2020 + future acquisitions; investor owns control stake here

Kenny — Technology Partner (independent vendor)

- ▶ 15+ years digital marketing consultancy; built the entire attribution + autodialer + integration platform
- ▶ **Independent** – owns TechCo outright, not an employee of OpsCo, not jointly liable for operations
- ▶ Licenses platform to OpsCo under a SaaS-style agreement with SLA and source-code escrow
- ▶ Available to license the same platform to non-competing operators in other geographies (TechCo upside is decoupled)
- ▶ Continuing platform investment: ADAS scheduling, fleet portal, multi-shop ops dashboard

Investors get the operator and the tech without the legal-entity entanglement that usually comes with two-founder deals.

Two separate companies. One commercial contract between them. No joint liability between the operator and the technology partner

OpsCo – operating company

- ▶ Owns AG2020 + future acquisitions
- ▶ Investor: control stake (typically 55-65%)
- ▶ Cash: operator equity (25-30%) + management role
- ▶ Bears all operating risk and balance-sheet obligations including the existing Chapter 11 plan
- ▶ Pays TechCo a vendor license fee – same line item as any SaaS subscription

TechCo – technology vendor

- ▶ 100% Kenny-owned; not an employee, partner, or board member of OpsCo
- ▶ Licenses platform under SaaS-style master agreement with SLA
- ▶ Source code in third-party escrow for OpsCo continuity protection
- ▶ Optional: TechCo may license the same platform to non-competing operators elsewhere
- ▶ No legal exposure to OpsCo's liabilities – clean separation

Where the \$4-5M growth round goes. Four pools, all forward-looking.

1. Bolt-on acquisitions

~\$2.5-3M

Acquire 2-3 Phoenix-metro shops over 18 months at 4x SDE. Each adds \$1-2M revenue + becomes a deployment site for the platform.

2. Working capital + ramp

~\$750K-1M

12-18 months of new-shop ramp buffer, contingency reserve, and onboarding costs (insurance EDI, equipment, hiring).

3. Marketing acceleration

~\$500-750K

Expand Google + Meta spend at the proven \$4.84x halo-adjusted ROAS. Add new geos (Tucson, Las Vegas) on top of Phoenix.

4. Tech vendor fee

\$500-750K

One-time license/build fee to TechCo at close. Buys exclusive Arizona-vertical use of the platform + 12 months of dedicated build/customization.

Total round: **\$4-5M**. Capital deployed against milestones – not one tranche. The investor controls the gating.

Sidebar: AG2020's existing Chapter 11 plan

AG2020 is operating under a confirmed Subchapter V plan with court-approved monthly payments that can be serviced entirely out of operating cash flow – current AG2020 EBITDA exceeds the scheduled plan service comfortably. **The plan is OpsCo's obligation, not the investor's cap raise.**

3-5× MOIC over 4 years on a \$4-5M check.

SCENARIO	Y4 SYSTEM EV	INVESTOR %	INVESTOR PROCEEDS	MOIC	~IRR
Downside (Y4 EBITDA \$1.5M, 6× exit)	\$9M	60%	\$5.4M	1.2×	5%
Base (Y4 EBITDA \$2.2M, 7× exit)	\$15.4M	60%	\$9.2M	2.0×	19%
Target (Y4 EBITDA \$2.8M, 8× exit + tech-enabled premium)	\$25M	60%	\$15M	3.3×	35%
Upside (5+ shops + 2nd-state expansion, 9× exit)	\$38M	60%	\$22.8M	5.1×	50%

Bankruptcy-payoff scenario (optional, +\$1.2-1.5M of capital): same structure, ~12-15% lower MOIC. The bankruptcy is OpsCo's obligation regardless – see slide 15 sidebar.

Why this beats a fund-style PE return

Direct operator alignment, 100% of upside accrues to capital + management (no GP carry above the line), and the tech moat compounds across every new unit. The growth thesis is fully forward-looking – not a balance-sheet cleanup.

Why an LP-style fund would walk

Sub-\$10M check size, operationally intensive, Arizona-concentrated, technology dependency on an outside vendor (mitigated by source escrow + SLA). This is a deal for an investor who likes to roll up their sleeves.

The default is clean. Here are two negotiable knobs if the investor wants them.

A. Investor takes minority equity in TechCo

If the investor wants direct exposure to platform upside (vs. only via the license royalty OpsCo pays out of operating budget):

- ▶ Investor takes **10-20% of TechCo** as a side deal, separately negotiated
- ▶ Kenny retains 80-90% control; TechCo board capped at 3 with Kenny majority
- ▶ Investor participates in TechCo cash distributions + any future TechCo sale
- ▶ Adds ~\$300-500K of investor consideration paid directly to Kenny for the equity
- ▶ Still no cross-liability – TechCo remains a separate legal entity

B. Accelerated Chapter 11 plan payoff

If the investor prefers a clean OpsCo balance sheet at close:

- ▶ Investor adds ~\$1.2-1.5M to the raise to retire the confirmed Chapter 11 plan in full at closing
- ▶ OpsCo emerges debt-free; faster trajectory to lender-friendly structure
- ▶ Reduces investor MOIC by ~12-15% (more capital in for same exit) but eliminates the plan-monitoring overhead and removes "company in bankruptcy" from due diligence narrative
- ▶ The negotiated payoff is below the gross claim amount because the plan already discounted unsecured claims to ~2.6% – court-approved

Both are pure-optional. Neither affects Kenny's vendor relationship or TechCo independence.

The platform is the moat. Replication takes 18-24 months and millions of dollars – if the team has the chops.

What competitors would have to build

- ▶ Multi-channel attribution wired into GlassBiller (the industry's dominant POS) and ActiveCampaign
- ▶ Real-time autodialer with verified caller ID + branded calling
- ▶ Statistical halo-lift methodology that survives peer-review-quality scrutiny
- ▶ 6 years of cleaned, normalized historical data to fit the model against
- ▶ Cron-driven Google + Meta + Bing spend ingestion with cost reconciliation
- ▶ End-to-end identity normalization (phone, email) across all touchpoints

What we already have, deployed

- ▶ All of the above, running in production at AG2020 today
- ▶ The Halo Lift API (the proof on slides 9-10) is a live endpoint serving the operations dashboard
- ▶ Multi-user dashboard with per-user permissions live for the AG2020 team
- ▶ Cron ingestion runs nightly, attribution recomputes weekly, no manual touch required
- ▶ Built on a stack we own outright – no SaaS lock-in, no rent extracted by a vendor

Safelite has the brand. We have the math. The math is more transferable across markets than the brand.

The market pays for what we're building.

DEAL	YEAR	PRICE	MULTIPLE	NOTES
Driven Brands acquires Auto Glass Now	Dec 2021	\$170M	8.0× EBITDA	~\$85M revenue at acquisition
CD&R secondary on Belron (Safelite parent)	Oct 2024	€21B EV	–	\$7B revenue, IPO planned 2026 at \$35B+
PGW → Dakotaland Autoglass	May 2025	undisclosed	–	13-location bolt-on
Driven Brands AGN segment (Q4 2024)	FY24	–	10% segment EBITDA	+7.9% same-store growth, promoted to standalone segment
Our exit target	Y4	\$18–28M EV	7–8× + tech premium	5+ shops, \$15–18M revenue, AZ + 1 adjacent state

Tech-enabled platforms in lower-MM auto services typically capture a 1.5-2 turn premium on exit multiple (PwC, 2024).

The honest list. None are deal-killers if structured correctly.

RISK	MITIGATION
OpsCo's Chapter 11 plan	Confirmed Subchapter V plan with court-approved payment schedule serviceable from operating cash flow. The plan is OpsCo's liability, separate from this growth raise. Optional accelerated payoff (~\$1.2-1.5M) available if investor prefers a clean balance sheet – see slide 17.
Key-man risk (Cash)	4-year vesting on Cash's post-deal equity. Non-compete + non-solicit. GM hired in Y1 to depersonalize operations. AG2020 SOPs already documented in the platform.
Vendor dependency on TechCo	Standard SaaS-vendor risk, addressed the standard way: long-term master license agreement with SLA, source code in third-party escrow (release triggers on TechCo default), perpetual run-time license for code already deployed, and Kenny contractually committed to N hours/month of platform maintenance. Backup engineering capacity contracted day-one.
Acquisition execution	Pipeline of 8-12 candidate Phoenix shops mapped before close. Independent operator network gives us proprietary deal flow. Investor approval gate on each acquisition.
Geographic concentration (AZ)	By design. Arizona is the best US market for the next 3-5 years. Geographic expansion (Tucson, Las Vegas, Albuquerque) sequenced for Y2-3 once AZ playbook is proven across multiple shops.
Insurer DRP relationships	AG2020 already has direct-billing relationships in place. New shops inherit them at acquisition. Insurer-relations playbook documented.
Macro auto-claim cyclicity	Auto-glass is one of the most counter-cyclical segments in automotive. Recessions don't reduce broken windshields; weather and driving habits drive demand.

\$4-5M growth raise for a control stake in a Phoenix auto-glass platform with a measurable, statistically-proven moat.

Funded growth

\$2.5-3M for 2-3 bolt-on acquisitions. \$750K-1M working capital + ramp. \$500-750K marketing acceleration at the proven 4.84x halo-adjusted ROAS.

Technology in place

\$500-750K one-time license/build fee to TechCo for exclusive Arizona-vertical use of the platform + 12 months of dedicated customization. No build risk – it's running today.

Clean cap table

OpsCo: Investor 55-65% control + Cash 25-30% operator equity (4-yr vest). TechCo: 100% Kenny (separate entity, vendor relationship). No joint liability.

Bankruptcy plan continues to service from operating cash flow
There's a parallel play in the same secular wave that this investor is uniquely positioned to take. – not part of this raise. Optional \$1.2-1.5M accelerator

available if you want it gone at close (slide 17).

The platform we use for AG2020 is the operational foundation.

The platform exists, the operator is in place, and the math has been audited statistically. What this raise buys is speed.

Layered on top is a separate venture aggregating independent

Why this investor specifically

- ▶ Same secular wave (ADAS) referenced on slide 4 of this deck
- ▶ AG2020 becomes the anchor network member – first shop on the platform
- ▶ Operating P&L from AG2020 informs CalibrateNet unit

Two checks, two different shapes

The AG2020 deal (slides 14-16) is a **control-stake operating roll-up** – cash-flow positive year 1, exit at 7-8x EBITDA in year 4.

CalibrateNet is a **venture-style network play** – seed → Series A at \$75-100M target (month 12-15) → potential strategic exit to an OEM, insurer, or vertical software platform at venture multiples.

Let's build the Southwest's tech-enabled auto-glass platform.
