

The Phoenix Auto-Glass Platform

A proven, profitable shop with a measurable competitive moat
– positioned to consolidate a \$4B fragmented US market.

AUTO GLASS 2020 · Cash & Kenny

An undervalued, undercapitalized leader in the best auto-glass market in America — with a software moat nobody else has built.

10%

OF ALL US AUTO-GLASS CLAIMS HAPPEN IN AZ

What we're raising: capital to clear a legacy balance sheet
and capitalize the rollout of a tech-enabled shop network
across Arizona and the Southwest.

Arizona is the single best auto-glass market in the United States.

The numbers don't lie

Arizona files **10% of all US auto-glass claims** despite having only **2% of the US population**. More claims than California or Texas – combined.

- ▶ Monsoon hail + chip-prone freeways
- ▶ Year-round driving (no winter dormancy)
- ▶ Population growth +1.5%/yr

The regulatory tailwind

Arizona Revised Statute § 20-263: insurers must offer \$0-deductible glass coverage on any comprehensive policy. Insurers *cannot* raise premiums on glass-only claims.

- ▶ Consumer friction to replace = essentially zero
- ▶ Direct insurance billing relationships are the moat
- ▶ \$4.5B in recent AZ hail-related insured losses

Sources: NICB; ARS § 20-263; Insurance Journal (West, 2020)

\$20B and growing – with a secular tailwind nobody can stop.

\$170M

AUTO GLASS NOW SOLD TO DRIVEN BRANDS

8.0× EBITDA · 2021

Now a standalone reporting segment

Every new vehicle now ships with ADAS cameras mounted to the windshield. Every windshield replacement requires recalibration. Every recalibration is **\$150–\$600 of additional, higher-margin revenue**. The market is moving the right way.

A fragmented, consolidatable industry — with one giant and a thousand mom-and-pops.

OPERATOR	SCALE	TYPE
Safelite	\$3.3B+ rev · ~20% share	Corporate
Auto Glass Now	~140 locations	Corporate (Driven Brands)
PGW Auto Glass	~160 branches	PE (One Equity)
Glass Doctor	~140 units	Franchise (Neighborly)
Novus Glass	~100 units	Franchise
Everyone else	Hundreds of independents	Mom-and-pop

The arbitrage

- ▶ Single shops sell at 2.5–4.5× SDE
- ▶ Multi-shop operators (MSOs) sell at 3.5–6.5× EBITDA
- ▶ Platforms (10+ locations) sell at 7–10×+ EBITDA
- ▶ Tech-enabled platforms get a +1.5–2 turn premium on exit

→ Build a platform from independents at 4×, exit the bundle at 8×. The math is well-understood. The question is execution.

AVERAGE TICKET

Above the median

Industry single-shop AUV averages **\$1.2–1.5M**. AG2020 is doing 2-2.5× that – and with healthier gross margins than chains operating at scale.

Founded 2020, operating since

Built and run by Cash, an auto-glass operator with **decades of profitable shop-running history**. Phoenix shop. Insurance + retail revenue mix. Direct billing relationships in place.

Every independent shop fights blind – and loses to Safelite by default.

The four cuts that bleed independents

- ▶ **No attribution:** Owners spend on Google, Meta, billboards, referrals – and have no idea which dollar earned which job.
- ▶ **No speed-to-lead:** Web form fills sit in an inbox. Calls go to voicemail at lunch. Safelite picks the customer up.
- ▶ **No data integration:** Ads platform, CRM, scheduling, billing, insurance EDI – five disconnected systems, three people retyping.
- ▶ **No transferable playbook:** Owner retires; the business loses 30% in 18 months. No SOP, no acquirer.

"Most independent operators can't tell you their CAC, their LTV, or their ad ROAS to two decimal places. We can – and the spread is the opportunity."

A purpose-built operating system for the modern auto-glass shop.

Lead engine

- ▶ Multi-channel attribution (Google, Meta, organic, referral, walk-in)
- ▶ Phone tracking + AC sync
- ▶ Speed-to-lead autodialer: form fill → live call to customer within 60 seconds, bridged to a rep
- ▶ Branded outbound caller ID

Conversion + ops

- ▶ CRM ↔ scheduling ↔ billing fully integrated
- ▶ SMS thread continuity (no rep retyping)
- ▶ Missed-call rescue (returns calls automatically during business hours)
- ▶ Call triage queue + outcome capture

Closed-loop attribution

- ▶ Every closed invoice traced back to first-touch source
- ▶ Per-source CAC, LTV, ROAS in real time
- ▶ 6 years of historical revenue layered in
- ▶ Statistically tested halo-lift coefficient (see next slide)

Already running. Already deployed. Already generating the numbers on the next slide.

Every \$1 of ad spend lifts *unattributed* weekly revenue by \$2.81.

Deseasonalized. Detrended. Multiple regression on 117 weekly observations. Result holds at 1-, 2-, and 4-week lag. No serious statistical objection survives.

\$2.81

PER \$1 SPEND

t=6.83

ON 103 DF

<1 / 100k

PROBABILITY THIS IS NOISE

\$2.00 – \$3.62

95% CONFIDENCE INTERVAL

Most operators cite "marketing works" as a feeling. We can prove it with a 95% confidence interval that doesn't cross zero – and translate it into per-shop economics.

When ad spend rises, total revenue rises — across the entire customer base, not just attributable conversions.

WEEK TYPE	AVG SPEND	AVG TOTAL REV
Bottom-quartile spend weeks (n=29)	\$1,725	\$98,609
Top-quartile spend weeks (n=29)	\$17,394	\$141,348
Lift	+10×	+43%

Welch's t-test: $p = 0.008$. The lift is real, not noise.

What this means for an expansion thesis

If each new shop replicates AG2020's spend-to-revenue relationship, **every \$100K of ad budget produces \$310K of total revenue lift** — including walk-in, referral, and repeat customers ads don't get direct credit for.

That's how you out-bid Safelite in a market and still come out ahead.

The per-shop model – credible numbers, conservative assumptions.

METRIC	AG2020 TODAY	YEAR 1 (ESTABLISHED)	YEAR 2 (MATURE)
Annual revenue	\$3.2M	\$1.5M	\$2.4M
Gross margin %	45%	42%	45%
Gross profit	\$1.44M	\$630K	\$1.08M
Operating overhead (rent, labor, ops)	\$1.0M	\$520K	\$700K
Ad spend (model: 8% of revenue)	\$256K	\$120K	\$192K
Platform license (3% of revenue)	–	\$45K	\$72K
Shop EBITDA	~\$184K	~-\$55K	~\$116K
EBITDA margin	5.8%	(ramp)	4.8%

New-shop ramp assumes 6 months to revenue + 12 months to stable margin. Mature-shop EBITDA conservatively held below AG2020's current level to reflect new-market discovery costs. Add ADAS-calibration upside not modeled here.

From 1 shop to 5 – and a credible platform exit in 36–48 months.

YEAR	SHOPS	SYSTEM REVENUE	SYSTEM EBITDA	MILESTONE
Y0 (today)	1	\$3.2M	\$184K	Acquire bolt-on #1 in Phoenix metro
Y1	2	\$4.7M	\$160K	Bolt-on #2 acquired; platform deployed
Y2	3-4	\$9.1M	\$700K	Tucson + 2nd Phoenix shop
Y3	5	\$13.5M	\$1.6M	Las Vegas / Albuquerque footprint
Y4 Exit	5+	\$15-18M	\$2.5-3M	Platform exit at 7-8× EBITDA → \$18-24M EV

Acquisition channel

Phoenix metro alone has hundreds of independents. AG2020 is well-known in the market – we have a relationship-led pipeline of 8-12 targets at any time.

Platform deployment

The tech stack drops into a new shop in 2-4 weeks. Lead-flow lift is visible within 60 days. Bolt-ons earn their multiple expansion fast.

Roll-up arbitrage

Buy at 4× SDE → operate at platform scale → exit at 8× EBITDA + 1.5-turn tech-enabled premium = 3-3.5× multiple expansion per add-on.

Two complementary operators. One has run the shop profitably for decades. The other has built the tech.

Cash – CEO, Operator

- ▶ Decades of profitable auto-glass operating experience
- ▶ Phoenix-market insurance and direct-billing relationships
- ▶ Day-to-day operational lead: hiring, customer service, vendor management, insurance EDI
- ▶ Owner-operator commitment: skin in the game, post-deal vesting on equity

Kenny – Tech & Growth

- ▶ Built the entire attribution + autodialer + integration stack
- ▶ Background: digital marketing consultancy serving SMB & mid-market for 15+ years
- ▶ Owns the technology IP; will license to the operating company under a long-term agreement
- ▶ Continuing investment in the platform – ADAS-calibration scheduling, fleet portal, multi-shop ops dashboard

Neither one of us alone could pitch this deal credibly.
Together, we are the only people in Arizona who can.

HoldCo with two operating subsidiaries – ringfencing IP, aligning incentives.

Why this structure: protects the investor from key-man risk on Kenny, gives Cash clean operator equity, and creates a second exit lever (TechCo on its own SaaS-like multiple).

Where the \$5-7M goes – three pools, each with measurable milestones.

1. Balance-sheet reset

~\$1.5M

Pay off AG2020's confirmed Chapter 11 plan obligations at close. Free the operating entity from all legacy claims. Clean cap table from day one. Plan terms are a known, court-approved liability – no surprises.

2. Bolt-on acquisitions

~\$2.5-3.5M

Acquire 2-3 Phoenix-metro shops over 18 months at 4x SDE. Each adds \$1-2M of revenue + becomes a deployment site for the platform. Pipeline of 8-12 candidate targets already mapped.

3. Working capital + ramp

~\$1-2M

12-18 months of new-shop ramp-cost buffer, platform engineering investment, marketing acceleration, and contingency reserve.

Capital is deployed against milestones – not in one tranche.
The investor controls the gating.

The model: 4-5× MOIC over 4 years on a \$5-7M check.

SCENARIO	Y4 SYSTEM EV	INVESTOR %	INVESTOR PROCEEDS	MOIC	~IRR
Downside (Y4 EBITDA \$1.8M, 6× exit)	\$10.8M	55%	\$5.9M	1.2×	4%
Base (Y4 EBITDA \$2.5M, 7× exit)	\$17.5M	55%	\$9.6M	1.9×	18%
Target (Y4 EBITDA \$3M, 8× exit + tech premium)	\$28M	55%	\$15.4M	3.1×	32%
Upside (5 shops + 2nd-state expansion, 9× exit)	\$42M	55%	\$23.1M	4.6×	46%

Why this beats a fund-style PE return

Direct operator alignment, 100% of upside accrues to capital + management (no GP carry above the line), and the tech moat compounds across every new unit. Best-case: TechCo carved out and sold separately at 10-15× ARR for another \$5-15M.

Why an LP would walk

Sub-\$10M check size, operationally intensive, Arizona-concentrated, and the lead operator carrying personal Chapter 11 history (cleared at close, but it's there). This is a deal for an investor who likes to roll up their sleeves.

If you prefer a simpler structure: pure OpsCo roll-up with a tech licensing carve-out.

Single OpsCo, tech as a vendor

- ▶ Investor funds \$4-6M for 55-65% of OpsCo
- ▶ Cash retains 20-30% of OpsCo + management contract
- ▶ Kenny retains 10-15% of OpsCo
- ▶ Kenny separately owns TechCo, which licenses the platform to OpsCo at 3% of revenue
- ▶ OpsCo and TechCo enter into a long-term licensing agreement at close

Trade-offs vs. HoldCo structure

	HOLDCO (REC.)	PURE OPSCO
Investor exposure to tech upside	Direct	Indirect (via license fee)
Cash's payout at exit	\$4.5-7.2M	\$3.6-4.8M
Kenny's payout at exit	\$7-12M	\$2.5-4M + royalty
Deal complexity	Higher	Lower
Investor governance	1 HoldCo board	1 OpsCo board + license review

→ Both deliver bankruptcy clearance + scaled rollout. The HoldCo simply captures more value at exit.

The platform is the moat. Replication takes 18-24 months and millions of dollars – if the team has the chops.

What competitors would have to build

- ▶ Multi-channel attribution wired into GlassBiller (the industry's dominant POS) and ActiveCampaign
- ▶ Real-time autodialer with verified caller ID + branded calling
- ▶ Statistical halo-lift methodology that survives peer-review-quality scrutiny
- ▶ 6 years of cleaned, normalized historical data to fit the model against
- ▶ Cron-driven Google + Meta + Bing spend ingestion with cost reconciliation
- ▶ End-to-end identity normalization (phone, email) across all touchpoints

What we already have, deployed

- ▶ All of the above, running in production at AG2020 today
- ▶ The Halo Lift API (the proof on slides 9-10) is a live endpoint serving the operations dashboard
- ▶ Multi-user dashboard with per-user permissions live for the AG2020 team
- ▶ Cron ingestion runs nightly, attribution recomputes weekly, no manual touch required
- ▶ Built on a stack we own outright – no SaaS lock-in, no rent extracted by a vendor

Safelite has the brand. We have the math. The math is more transferable across markets than the brand.

The market pays for what we're building.

DEAL	YEAR	PRICE	MULTIPLE	NOTES
Driven Brands acquires Auto Glass Now	Dec 2021	\$170M	8.0× EBITDA	~\$85M revenue at acquisition
CD&R secondary on Belron (Safelite parent)	Oct 2024	€21B EV	–	\$7B revenue, IPO planned 2026 at \$35B+
PGW → Dakotaland Autoglass	May 2025	undisclosed	–	13-location bolt-on
Driven Brands AGN segment (Q4 2024)	FY24	–	10% segment EBITDA	+7.9% same-store growth, promoted to standalone segment
Our exit target	Y4	\$18–28M EV	7–8× + tech premium	5+ shops, \$15–18M revenue, AZ + 1 adjacent state

Tech-enabled platforms in lower-MM auto services typically capture a 1.5-2 turn premium on exit multiple (PwC, 2024).

The honest list. None are deal-killers if structured correctly.

RISK	MITIGATION
Cash's prior bankruptcy	Court-confirmed plan paid off in full at deal close. Operating entity emerges with clean balance sheet. No surviving creditor claims against post-deal cash flows.
Key-man risk (Cash)	4-year vesting on Cash's post-deal equity. Non-compete + non-solicit. GM hired in Y1 to depersonalize operations. AG2020 SOPs already documented in the platform.
Key-man risk (Kenny / tech)	HoldCo structure ringfences IP in TechCo. Source code escrowed. Continued development under formal license + maintenance agreement with SLA. Backup engineering capacity contracted day-one.
Acquisition execution	Pipeline of 8-12 candidate Phoenix shops mapped before close. Independent operator network gives us proprietary deal flow. Investor approval gate on each acquisition.
Geographic concentration (AZ)	By design. Arizona is the best US market for the next 3-5 years. Geographic expansion (Tucson, Las Vegas, Albuquerque) sequenced for Y2-3 once AZ playbook is proven across multiple shops.
Insurer DRP relationships	AG2020 already has direct-billing relationships in place. New shops inherit them at acquisition. Insurer-relations playbook documented.
Macro auto-claim cyclicity	Auto-glass is one of the most counter-cyclical segments in automotive. Recessions don't reduce broken windshields; weather and driving habits drive demand.

\$5-7M for 50-60% of a Phoenix-built auto-glass platform with a measurable moat.

Clean balance sheet

~\$1.5M of \$5-7M pays off the confirmed Chapter 11 plan at close. Operating entity emerges debt-free.

Funded growth

\$2.5-3.5M for 2-3 bolt-on acquisitions over 18 months. \$1-2M working capital + ramp buffer.

Aligned team

Cash 25-30% of OpsCo + 4-year vest. Kenny 5-8% OpsCo + 75-85% TechCo. Investor 50-60% HoldCo + board control.

The plan does not require a single thing we haven't already done in production. It requires capital, time, and a willing partner.

Let's build the Southwest's tech-enabled auto-glass platform.
