

PAID-CHANNEL ENGAGEMENT — REVISED

Three Paths Forward

Paid-channel focus, email deferred, conversion tracking implemented by Falcon engineering. Three structural options sized to a \$25K/month initial ad budget, with expanded performance upside.

June 24, 2026

VALID THROUGH

August 31, 2026

Where We Landed

Three structural changes from prior versions, all reflecting Falcon's feedback. The result is a meaningfully smaller engagement sized to the stated \$25K/month ad budget.

What changed since the prior options doc

Email program deferred. Per Falcon's request, the email program is removed from this scope and revisited later. The original argument for building email first was attribution — without a way to capture and track leads, ad spend can't be tied to outcomes. That gap is now filled by the next change.

Conversion tracking implemented by Falcon engineering. Hyder Media defines the conversion event spec, server-side API requirements, and data layer needs. Falcon's engineering team implements them on the site, app, and Apollo.io integration. Hyder Media validates the implementation end-to-end before any paid spend launches. This is the substitute for the email-based attribution layer.

Sized to a \$25K/month ad budget. All three paths assume Falcon's stated initial monthly budget. Setup and management costs are scaled accordingly, and the per-platform marginal fee tiers from prior versions still apply as ad spend scales beyond initial budget.

Full technical approach, channel-by-channel build detail, and dashboard architecture remain consistent with the original proposal at hyder.me/falcon-proposal except for the email program (removed) and tracking ownership (transferred to Falcon engineering).

SECTION 02

Revised Scope Summary

What stays, what's gone, what shifts ownership.

What Hyder Media still owns

- Conversion event spec and data-layer requirements document (input to Falcon engineering)
- Server-side API configuration on the platform side: Meta Conversions API, LinkedIn server events, Google enhanced conversions
- End-to-end validation of tracking implementation before any paid spend launches
- Google Ads campaign architecture, audience build, launch, and ongoing management
- Meta Ads campaign architecture, audience build (CRM lookalikes), launch, and ongoing management
- LinkedIn Ads campaign architecture, account-list targeting build, launch, and ongoing management
- Cross-platform performance dashboard for Falcon leadership reporting
- Site and stack optimization (SEO/AEO) included as part of foundation work
- Weekly KPI snapshots, bi-weekly strategy calls, monthly performance reports, quarterly business reviews

What Falcon engineering now owns

- Implementation of the conversion event tracking on the Falcon website / app (GTM tags, event firing, data-layer pushes per spec)
- Apollo.io integration to capture attribution data on inbound leads
- Any product-side data emission that the spec calls for (signup events, install events, paid-customer events, etc.)

What's deferred

- Email service provider selection, setup, and warm-up
- Domain authentication and dedicated sending infrastructure
- Lifecycle email flow design and build

- Monthly email program management retainer
- Email admin dashboard

Existing Google Ads infrastructure

Falcon mentioned existing Google Ads infrastructure that can be reviewed in more detail. Week 1 of any path includes a discovery audit of what's already in place. If existing campaigns, audiences, or conversion configurations are usable as-is or with adjustments, Hyder Media will credit the time savings against the Google Ads setup fee on a documented basis (typical savings \$1K-\$3K depending on what's reusable).

SECTION 03

Unit Economics — Same Anchor

The performance model still anchors on the per-merchant economics Falcon shared:

\$63K

ANNUAL LTV / MERCHANT

\$0.35

PER ORDER MONETIZATION

30%

TAKE RATE / MARGIN

\$25K

INITIAL MONTHLY AD BUDGET

The expanded performance bonus structure in Section 07 is calibrated against the \$63K LTV with deliberately accessible triggers, so even at the modest initial ad budget the bonus structure is reachable when performance is good.

The Three Paths

Three structural alternatives sized to the \$25K/month budget. All include the same scope (paid media management across Google + Meta + LinkedIn, dashboards, ongoing optimization). What differs is pace and term commitment.

	PATH A — RECOMMENDED	PATH B — COMPRESSED LAUNCH	PATH C — GOOGLE- FIRST
Total setup	\$26K	\$26K	Up to \$26K
Foundation invoice (on signing)	\$14K	\$26K	\$14K
Monthly during single-platform phase	\$5K (months 2)	n/a	\$5K
Monthly at full deployment	\$7.5K min	\$7.5K min	\$7.5K min
All channels live by	Month 5	Month 2	Falcon- triggered
Minimum term	18 months	12 months	24 months
Dashboard license	Falcon (perpetual)	Falcon (perpetual)	Falcon (perpetual)
Best for	Measured ramp + lowest total	Fastest results, longest test	Lowest early monthly

All three paths use the same per-platform marginal fee structure (8% of first \$100K combined monthly spend, 6% on \$100K–\$250K, 4% above \$250K, with a \$7,500/month minimum when all three platforms are active). At the initial \$25K/month ad budget, the percentage calculation lands below the minimum, so the \$7,500 floor applies until ad spend scales past ~\$94K/month combined.

PATH A

Phased Launch, 18-Month Term **RECOMMENDED**

Google Ads launches first (where Falcon has existing infrastructure to leverage). Meta and LinkedIn layered in once Google is producing data. Same total scope, paced for measured ramp.

Setup & recurring schedule

PHASE	TIMING	SETUP INVOICE	MONTHLY ADDED
1: Tracking spec + Google Ads launch	Months 1-2	\$14,000 on signing	\$5K starting mo. 2
2: Meta Ads launch	Months 3-4	\$6,000 start of mo. 3	bumps to \$7.5K min
3: LinkedIn Ads launch	Months 5	\$6,000 start of mo. 5	\$7.5K min holds
STEADY STATE: MONTHS 6-18 AT FULL DEPLOYMENT			
Total Setup		\$26,000	

Key terms

- **Term:** 18-month minimum, auto-renews quarterly
- **Software:** Perpetual irrevocable license on the cross-platform performance dashboard
- **Performance bonus:** Expanded structure per Section 07 below
- **Falcon's monthly outlay at initial budget:** \$25K ads + \$5K-\$7.5K management = \$30K-\$32.5K total monthly
- **Total 18-month investment to Hyder Media (excluding ad spend):** ~\$140K depending on ramp and bonus triggers

Why this is the recommended path

Path A leverages the Google Ads infrastructure Falcon already has, gets first results within 60 days, and gives breathing room between platform launches so each one can be optimized with the data the previous one produced. The 18-month term reflects Hyder Media carrying the staged-rollout risk longer; Falcon gets the lowest total monthly burn in the early months.

PATH B

Compressed Launch, 12-Month Term

All three platforms launch in the first 60 days. Fastest path to a complete picture of cross-channel performance. Shorter minimum term because Falcon is committing to faster spend deployment.

Setup & recurring schedule

PHASE	TIMING	SETUP INVOICE	MONTHLY ADDED
1: Foundation (tracking + Google + Meta scaffolding)	Month 1	\$15,000 on signing	—
2: Launch all platforms	Month 2	\$11,000 start of mo. 2	\$7.5K paid mgmt min starting mo. 2
STEADY STATE: MONTHS 3-12 AT FULL DEPLOYMENT			
Total Setup		\$26,000	

Key terms

- **Term:** 12-month minimum, auto-renews quarterly
- **Software:** Perpetual irrevocable license on the cross-platform performance dashboard
- **Performance bonus:** Expanded structure per Section 07 below
- **Falcon's monthly outlay at initial budget:** \$25K ads + \$7.5K management = \$32.5K total monthly from month 2 onward
- **Total 12-month investment to Hyder Media (excluding ad spend):** ~\$108K depending on bonus triggers

When this fits

Path B is the right choice if Falcon wants a full read on cross-channel performance early enough to make informed scaling decisions by quarter 2. The trade-off is a more demanding first 60 days for Falcon's engineering team (all platform tracking implementations land in parallel) and full management fees from month 2 instead of a slower ramp.

PATH C

Google-First, Performance-Triggered Expansion, 24-Month Term

Google Ads launches first. Meta and LinkedIn launch only when Falcon decides Google performance justifies expanding the channel mix. Lowest early monthly cash outlay. Longer term required because Hyder Media carries the deferred-revenue risk.

Setup & recurring schedule

PHASE	TIMING	SETUP INVOICE	MONTHLY ADDED
1: Tracking spec + Google Ads launch	Months 1-2	\$14,000 on signing	\$5K starting mo. 2
2: Meta Ads launch	Falcon-triggered (by mo. 9)	\$6,000 at activation	bumps to \$7.5K min
3: LinkedIn Ads launch	Falcon-triggered	\$6,000 at activation	\$7.5K min holds
Total setup if all platforms activated		\$26,000	

Key terms

- **Term:** 24-month minimum, auto-renews quarterly
- **Software:** Perpetual irrevocable license
- **Performance bonus:** Expanded structure per Section 07 below
- **Phase 2 trigger requirement:** Meta Ads must launch by end of month 9. If Falcon defers past that, a \$3,000 phase-deferral fee applies at start of months 10 and 13 if Meta is still not launched. This compensates Hyder Media for missed management ramp-up.
- **Monthly during Google-only phase:** \$5K management + \$25K ads = \$30K total

When this fits

Path C makes sense if Falcon wants to validate Google Ads performance before committing to Meta and LinkedIn spend. The longer 24-month term, the lower management minimum in the single-platform phase, and the deferral-fee structure together let Falcon control timing while protecting Hyder Media against an indefinite Google-only engagement at sub-target monthly recurring.

Expanded Performance Upside

The performance bonus is the compensating mechanism for Falcon's structural concessions. Triggers are intentionally accessible. Upside percentages are doubled from the original proposal. Falcon retains the majority of upside at every tier.

Three deliberately accessible tiers

Floor (always applies): the engagement must be net positive for Falcon — annualized profit run-rate from acquired merchants exceeds total cost — before any bonus tier triggers. No bonus when Falcon isn't ahead.

Tier 1 — 10% of net profit: trailing 3-month blended CAC is at or below the Scale-phase target. Matching the target triggers bonus — not "beat target by X%".

Tier 2 — 15% of net profit: trailing 3-month blended CAC is 20% below the Scale-phase target.

Tier 3 — 20% of net profit: trailing 3-month blended CAC is 40% below the Scale-phase target.

Net profit defined: (merchants acquired in period × \$63,000 annualized LTV) – (total ad spend + Hyder Media fees in period).

How the Scale target gets set: deliberately conservative

At end of month 3, the Build & Test phase has produced trailing 60-day blended CAC across the platform(s) live at that point. The Scale-phase target is set at **that actual blended CAC × 1.25** — a 25% buffer above what was already achieved.

Practical impact: if actual trailing CAC during Build & Test is \$4,000, the Scale target lands at \$5,000. Tier 1 bonus triggers when ongoing performance matches the original \$4,000 actual. Tier 2 triggers at \$4,000 (20% below the \$5,000 target). Tier 3 triggers at \$3,000 (40% below). The target is calibrated for upside, not gatekeeping.

Mechanics

- **Measurement period:** rolling trailing 3 months, assessed at end of each calendar quarter
 - **First eligible period:** months 4–6, assessed at end of month 6
 - **Scope:** all active paid channels combined (Google + Meta + LinkedIn as they come online)
 - **Bonus invoiced:** within 15 days of quarter close, Net 15 payment terms
 - **Falcon's share at every tier:** Tier 1 = Falcon keeps 90%, Tier 2 = Falcon keeps 85%, Tier 3 = Falcon keeps 80%
-

SECTION 08

Terms

Inheriting from the original proposal Section 09 except where modified here.

What changed for the revised paid-channel-only scope

- **Email program removed** from scope. Can be added back via a separate scope-of-work amendment at any time during the engagement.
- **Conversion tracking implementation ownership** transferred to Falcon engineering, with Hyder Media owning spec, server-side platform configuration, and validation.
- **Minimum term length:** 18 months (Path A), 12 months (Path B), or 24 months (Path C), versus 12 in original
- **Foundation invoice:** \$14K (Paths A and C) or \$15K (Path B), down from \$30K in original
- **Monthly paid-media-management minimum:** \$7,500 once all three platforms are active, or \$5,000 during single-platform phases (down from \$12,500 total in original which included \$5K email retainer)
- **Performance bonus structure expanded** per Section 07

What didn't change

Account ownership, perpetual irrevocable software license treatment, confidentiality, reporting transparency, invoicing terms (Net 15), early termination provisions all carry forward from the original proposal Section 09 unchanged.

SECTION 09

Get Started

Pick a path. Sign. Foundation invoice due on signing. Discovery + tracking spec begins immediately, Google Ads infrastructure audit in week 1.

Initial investment to commence

Foundation work (Google Ads infrastructure audit, conversion tracking spec for Falcon engineering, server-side platform configuration, dashboard architecture, site optimization) delivered in weeks 1 to 4.

PATH A OR C

\$14,000

PATH B

\$15,000

FOUNDATION INVOICE (ON SIGNING)

\$14K–\$15K

Subsequent phase setups follow per chosen path. Monthly management fee begins month 2.

Ready to move forward, or have questions on any path? Reach out anytime.

kenny@hyder.me

Prepared by **Hyder Media** for **Falcon Labs**

Kenny Hyder · kenny@hyder.me · hyder.me

This document supersedes the prior options proposal at hyder.me/falcon-options with a paid-channel-only scope reflecting Falcon's June 23–24 feedback (defer email, \$25K/month initial ad budget, conversion tracking implemented by Falcon engineering). Scope of work, technical approach, account ownership, confidentiality, and dashboard license treatment are all inherited from the original proposal at hyder.me/falcon-proposal except where explicitly modified here. The \$63K annual profit per merchant figure (50K monthly orders, \$0.35 per order, 30% take rate) was provided by Falcon and serves as the LTV anchor. Specific Scale-phase CAC target is set at end of month 3 against trailing 60-day actual × 1.25 (a 25% conservative buffer). Document valid through August 31, 2026. All dollar amounts USD.
